Submission: "Dear Sir/Madam,

I get a measly 11cents for each kilowatt that I generate and feed into the grid. I get charged almost 30 cents per kilowatt on power that I use.

Either the electricity company is stealing from me or IPART is not dealing fairly with consumers who try to keep energy prices down. It is bad enough that the cost of supply has gone up at an alarming rate, but paying the electricity companies to take what I supply is appalling.

Domestic Solar Energy Suppliers should get a better deal than what we are getting at present."
