

SUBMISSION TO IPART REVIEW
SOLAR FEED-IN TARIFFS 2017/18

Friday, 19 May 2017

12:32:06 PM

It is ridiculous to think many people will take of on solar if the feed in tariff is so low. As it is I have 10 kw and use the grid for night power.

However it may swing the other way as grid power costs rise.

Be prepared for a mass exodus from the grid as battery prices fall. This will put more price pressure on the remaining grid powered customers.

Better to have a fair feed-in tariff to retain solar customers than to lose them altogether.

I am very close to buying batteries due to the poor feed in tariff.

Yours sincerely

Michael Begg
