Submission: I am writing to ask you to help those of us who have installed solar panels, in order to both save money, and more importantly, to progress our future in renewable energy. EVEN when the sun doesn't shine, and the wind doesn't blow, some of us want to pursue this avenue. We need a decent rebate for any solar energy we generate. Our planet is worth so much more than trying to find fault and point fingers at political opponents. Please consider that many of us vote. Thank you.
