**SOLAR FEED-IN TARIFFS 2017/18**

**Thursday, 11 May 2017**  
9:31:04 AM

Our solar installation is an innovative investment for our children's future, our country's future and our commitment to reduce our carbon footprint and global warming! We also run a small business, we treat suppliers and customers with respect and in turn have developed a mutual trust, which is the foundation for success. Trust is both financially and morally binding. When treated unfairly, we naturally react. We believe as good business people we should forward a Tax Invoice to our electricity supplier for fair use of our power production. We know the demand for power is there and are happy to share any excess at a FAIR price. The present rate is greedy, unfair and displays a complete disregard for community expectations.
