Submission: "I am concerned to hear that IPART are considering cutting the price of feed-in electricity so that the big companies can make a bigger profit.

My husband and I payed a very large sum of money to set up our solar system and did not even receive sufficient payments under the Govt scheme to cover these costs. Why is the Government considering an action that forces us to GIVE or SELL at a loss just to give advantage to big business in Australia. If they want the electricity for nothing or next to nothing, then they should pay the costs of set-up and ongoing maintenance. We are pensioners and find these ongoing government considerations and decisions to be anti-Australian and very poor in judgement. The feed-in tariff should represent the true value of solar, this means recognising the environmental and health benefits and the network benefits of rooftop solar. Stop steeling our assets."
