SOLAR FEED-IN TARIFFS 2017/18

Friday, 19 May 2017

4:52:51 PM

I fully support the benchmarking of the feed-in tariff in line with the increases in wholesale electricity. Electricity retailers should be set a minimum tariff which should represent the true value of solar energy - something a lot closer to the retail tariffs than at present. It is incomprehensible that the solar energy produced on my panels can be sold to my neighbour for 10X the price I receive for it.
