

SUBMISSION TO IPART REVIEW
SOLAR FEED-IN TARIFFS 2017/18

Friday, 19 May 2017

3:12:28 PM

Dear IPART,

RE: NSW solar feed-in tariff benchmark to 11.6-14.6c per kWh

I'm writing to support the Tribunal's proposal that the NSW solar feed-in tariff benchmark be raised to 11.6-14.6c per kWh in line with the increased wholesale price of electricity.

Currently large power companies are making a huge profit through not paying a reasonable feed-in tariff. Currently, people in my neighbourhood get charged a 300% mark-up on the power supplied to them from neighbouring roof-top solar by the power companies. I am sure you agree that this is shameful.

Considering the environmental and health benefits and the network benefits of rooftop solar one would have to say that the feed-in tariff should be even higher than that proposed.

I believe the feed-in tariff should not just be a benchmark range, it should be regulated so retailers have to offer it as a minimum.

Your sincerely,

Dr Michael Fisher
