SOLAR FEED-IN TARIFFS 2017/18

Wednesday, 10 May 2017
1:46:05 PM

I support a fair price for solar. The feed in tariff should increase in line with the wholesale price of electricity, why am I essentially increasing the big companies profits by supplying them with cheap electricity?

The feed-in tariff should not just be a benchmark range, it should be regulated so retailers have to offer it as a minimum otherwise they won't offer the full amount. The power companies are there to make profit not be fair.

The feed-in tariff should represent the true value of solar, this means recognising the environmental and health benefits and the network benefits of rooftop solar to help the environment.
