SOLAR FEED-IN TARIFFS 2017/18

Friday, 19 May 2017

10:27:03 PM

The feed in Tariff should be comparable to the wholesale rate of electricity. The current approx 6 cents is just making a large profit to the big suppliers. These electricity suppliers are not assisting in the environmental benefits of solar. Roof top solar should be given a fair price for their solar power supply back to the grid.

Maybe 50% of the charge of electricity to their own home.
