SOLAR FEED-IN TARIFFS 2017/18

Friday, 19 May 2017
12:06:37 PM

After having a solar + battery system installed last year I am still exporting 50-100 kWh per month at the nominal rate of 6c, and purchasing power back at the full retail rate. I support the increase to the feed-in tariff as it recognises the contribution that solar systems make to the power grid. The feed-in tariff needs to increase at least to the wholesale electricity price and should be regulated to ensure that all retailers pay solar owners a fairer price.
