Submission: Stormwater Drainage Prices.

CCC are proposing to charge a flat rate of \$110 for all residential properties regardless of size.

I would like to have the rate (locked in) to cover all residential properties regardless of size. I would not want a system that can be reviewed every four years, which could result in residential properties being charged a rate based on their land size under a decision by Council. Many rural properties have had their classification changed to residential by council with no consultation to landholders. Should the council be able to review this levy and decide to charge it out based on a land size billing this would result in great hardship for rural landholders. My understanding is the CCC will be able to review the rate after four years.
