

**SUBMISSION TO IPART REVIEW**  
**SOLAR FEED-IN TARIFFS 2017/18**

**Friday, 19 May 2017**

12:21:30 PM

I have invested in a solar feed in tariff system and I pay premium for any electricity used but only get a fraction back of the electricity I give to the system. It is very unfair to me and to future generations who need everyone to make more better environmental decisions so that climate change can be better dealt with. But financial incentives need to be in place for this so everyone can do their bit.

I believe there should be a minimum price offered for feed in tariffs and that this price should be fair and reflective of the retail prices charged.

I pay over 30 cents and I get what 6 cents ? how is that even fair ?

Regards
