SOLAR FEED-IN TARIFFS 2017/18

Friday, 19 May 2017
11:29:49 AM

The feed in tariff should be exactly whatever the wholesale price is for that time of day.

That price should be a base line, a minimum.

I personally have been given discounts on coal power because I have decided to change retailer, This has far exceeded what I am compensated for the solar.

In other words:

With our current system making a phone call was worth more dollars than spending \$6,000.00 on a grid connect solar setup.

Furthermore it encourages the use of fossil fuels.

This has to stop.
