SOLAR FEED-IN TARIFFS 2017/18

Tuesday, 9 May 2017

11:34:48 PM

I support a fair price for solar;

Presently I sell my PV electricity at 8.2 cts (to Powershop) but I have to buy it back at up to 46.72cts per kWh

The feed-in tariff should increase in line with the wholesale price of electricity;

The feed-in tariff should not just be a benchmark range, it should be regulated so retailers have to offer it as a minimum;

The feed-in tariff should represent the true value of solar, this means recognizing the environmental and health benefits and the network benefits of rooftop solar; and

any personal examples about your solar systems and experiences with the feed-in tariff.

I support that the grid be upgraded to better support the feed-in of PV electricity

I also would like to be able to sell my PV electricity at a higher rate (then normal feed-in) at critical period when the grid needs it
