Date of submission: Tuesday, 8 May 2018

Submission: "Support for solar is essential both for reasons of reducing CO2 emissions from fossil fuel energy generation, and to reduce the cost of electricity to consumers. There is an urgency to promote widespread uptake of solar energy as one way to address increasing warming and climate instability.

A fair feed in tariff will increase take up of solar energy and reduce the need for investment in any centralised generation system.

please support a fair and reasonable price system for solar energy."
