SOLAR FEED-IN TARIFFS 2017/18

Wednesday, 10 May 2017
3:56:58 PM

I would like to see a fair price for the solar electricity that I feed into the Grid as I only receive 6c at the present which is half of what is a fair price. I have paid for the generating capacity out of my pocket and should expect a fair return. After all I am saving on the cost of generating capacity that would be put in place to fill the requirements that private industry would have to put in to generate electricity. It is not too much to ask to receive a fair price for my investment in clean renewable energy.
