SOLAR FEED-IN TARIFFS 2017/18

Friday, 19 May 2017

8:27:04 PM

I've invested in nearly 5kW of panels, and some of my solar power is distributed to my local grid, to become input power for other peoples meters at full retail price, and reduces the full summertime demand on our inefficient polluting coal power stations. Current economics not only fails to recognize the externalized climate and health costs of burning gas and coal, but also fails to decently reward the benefits of small scale, non-polluting power contributions.
