

SUBMISSION TO IPART REVIEW
SOLAR FEED-IN TARIFFS 2017/18

Friday, 19 May 2017

8:04:13 PM

Dear Sir/Madame

I have been a recipient of the overly generous 60c feed in tariff which would have been more sustainable if a cap had been put in place to curb those with big roofs and bigger pockets ! , but that is in the past .

I would like to see a fair and sustainable feed in tariff that represents the true environmental benefits of solar energy.

That retailers are required to pay this amount as a minimum (to avoid tens of thousands of environmentally suspect battery systems being dumped in the future)

And that the tariff increase or decrease in line with wholesale base load prices

I believe there should be a cap or sliding scale to discourage overly large residential systems

Matthew Smith
