SOLAR FEED-IN TARIFFS 2017/18

Friday, 19 May 2017

9:51:01 PM

I support a fairer price for those who provide electricity to the grid via solar. The feed in tariff needs to represent the contribution made by this form of energy production and should be in line with the wholesale energy prices provided by energy retailers. Moreover, this price for solar energy should be regulated and a minimum price set so that energy retailers dont profit from the energy provided by their consumers. Currently this energy system is quite simply economically unfair and morally wrong and needs to change.
