SOLAR FEED-IN TARIFFS 2017/18

Friday, 19 May 2017

1:07:31 PM

I strongly support an increase in the feed-in tariff for domestic solar power and that this be mandated for retailers to pay, as opposed to an option. It is clearly an absurdity that a solar power supplier can be paid as little as 6c per Kwh during peak period while the retailer on-selling this power is receiving over 50c.
