**SOLAR FEED-IN TARIFFS 2017/18**

**Friday, 19 May 2017**  
11:48:39 AM

I support a fair price for solar electricity. The feed-in tariff should increase in line with the wholesale price of electricity. The feed-in tariff should not just be a benchmark range, it should be regulated so retailers have to offer it as a minimum. It should represent the true value of solar, this means recognising the environmental and health benefits and the network benefits of rooftop solar. The price of an electron sold into the grid should be discounted because it came from the conversion of the sun's energy.
