SOLAR FEED-IN TARIFFS 2017/18

Friday, 19 May 2017

1:54:45 PM

I believe there should be a COMPULSORY MINIMUM feed in tariff for solar, rather than a recommended range. This would be much more likely to deliver a fair outcome for all. In order to truly represent the full health and environmental benefits of solar, this minimum should probably be considerably higher than the top end of the range that has been suggested.
