SOLAR FEED-IN TARIFFS 2017/18

Friday, 19 May 2017
11:55:48 AM

Thank you for your proposal to increase the feed-in tariff of electricity. I support this proposal and agree the tariff should increase in line with the wholesale price of electricity. I also agree that retailers should offer the feed-in tariff as a minimum when supplying consumers that have solar systems fitted. Solar power generation is great for our environment and should be encouraged. Offering a fair price for feed-in electricity is one way of encouraging more consumers to install solar systems and leave a better environment for future generations to come.
