SOLAR FEED-IN TARIFFS 2017/18

Friday, 19 May 2017
12:07:59 PM

We need a quick transition away from fossil fuels that are upsetting the natural balance on this unique, life-filled planet that's our only home.

I believe this so much that I bought my first solar panels in 2008, added more panels in 2010 and right now have another 2kw system ordered that's due to be installed next Wednesday.

This represents my total investment in rooftop solar of over \$46,000.00!

The feed-in tariff should be set to encourage massive solar rooftop uptake, and reflect the investments ordinary people are making to secure a healthy future away from fossil fuels. Life on this planet first appeared some 3.5 billion years ago and we have no right to wipe out the extraordinary range of species that have developed since then.
