**SOLAR FEED-IN TARIFFS 2017/18**

**Friday, 19 May 2017**  
11:24:23 AM

Rooftop solar has helped to eliminate the high cost of electricity on hot afternoons, thus decreasing the need for additional coal fired power. If handled properly, it will make a significant contribution to our stationary energy, therefore, people should be recompensed with a fair price for solar. A minimum price should be mandated by iPart.

However, while encouraging additional solar installation, such a price should not, in the long run, be responsible for an increase in costs to low income households. Nor should it be blamed for price increases, particularly those that result from upgrading electricity poles and wires or profits, as renewable energy has in the past.

Regards, Patsy Asch
