SOLAR FEED-IN TARIFFS 2017/18

Sunday, 21 May 2017

6:42:30 PM

I think we are in a race against time to move to sustainable energy. Large numbers of Australians want to help this process. Having solar panels on our rooftops is a way many of us can contribute. By making the payments we receive for the energy we generate fair encourages Australians to believe that our leader understand what we want. I support a fair price for solar energy fed back to the grid that increases in line with the prices charged for electricity - preferably in line with the wholesale price. The price paid should be regulated, not just suggested. We were fortunate to get the large feed-in tariff in NSW some years ago. We have used the money we saved on that system to now add solar hot water. In this way we are paying to reduce the burden on our network, particularly in peak demand periods. Please help us to a future that we can hand on to our children and grandchildren with pride, not shame.
