SOLAR FEED-IN TARIFFS 2017/18

Friday, 19 May 2017

7:44:28 PM

Dear iPart

I strongly support the need for a fair price for solar, which should be a regulated minimum price that retailers must offer.

My household has already made an investment in rooftop solar, partly to reduce our power bill in the long term and partly because we believe in investment in cleaner, renewable power sources.

We have only ever received a low feed-in tariff, which does not reflect the wholesale price of electricity.

This low income combined with continued increases in fixed costs on our power bill, means we are seriously considering more investment in battery storage and going 'off-grid' completely. We are not alone in considering this position.

Yours faithfully

Patricia Daly
