Submission: "Contributors of rooftop solar electricity to the grid, should be paid a fair and reasonable price for the energy that their mini generators produce. Their contributions have added to the stability of the grid, have helped prevent blackouts during high demand periods, thus reducing costs to the main supply operators. It is outrageous for these retailers to suggest that the Feed in Tariff be reduced.

IPART should ensure that the FiT needs to be regulated and mandated so that the retailers have to offer it as a minimum."
