**SOLAR FEED-IN TARIFFS 2017/18**

**Friday, 19 May 2017**

1:48:49 PM

The feed in tariff for solar panels should be at the very least 70% of the price the energy providers charge to solar citizens. Solar panels are not maintenance free, there are on going costs with inverters as we have found out to our expense.

How would it be for the national powers supply, with coal fire power stations now closing down, If all solar citizens decided it was not worth maintain their panels and shut them down. Or actually found it a better option to install very expensive battery storage for the solar.

Its time for the government and energy suppliers to give all solar citizens a fair go in this regard.

Time to stop ripping us off!!

Peter
