

**SUBMISSION TO IPART REVIEW**  
**SOLAR FEED-IN TARIFFS 2017/18**

**Wednesday, 10 May 2017**  
9:33:48 PM

I am really pleased to see that IPART is planning to make feed in tariffs higher and in line with the real value of the electricity. That is what would it cost to produce that electricity from the generator itself.

I almost didn't fill this out, until reminded myself that this is not only a financial argument- but how do I explain to my children that I did nothing to help create a better environmental future. What stops more people saying anything is a sense of almost hopelessness that they will be listened to by those that have the power.

So please give our future at least an equal chance, with equality ( or bit better) of pricing.
