SOLAR FEED-IN TARIFFS 2017/18

Sunday, 21 May 2017

8:59:23 AM

I support a fair price for solar.

The feed-in tariff should increase in line with the wholesale price of electricity.

The feed-in tariff should not just be a benchmark range, it should be regulated so retailers have to offer it as a minimum

It should represent the true value of solar, this means recognising the environmental and health benefits and the network benefits of rooftop solar.

We were originally on the 60c per kwh ,using that to help pay off our solar system as were many told they would be able to when investigating affordability to do so .

This feed in tariff was a major reason for us to go ahead.

Now that is gone we feel ripped off and sucked in by the government.

That's not how a voter wants to feel.

Thanks,Paul
