**SOLAR FEED-IN TARIFFS 2017/18**

**Tuesday, 9 May 2017**  
11:39:52 AM

G'day .. i'm a rooftop solar owner and have been for justt on 7 years.  
without solar connected to my place i don't know how i'd afford to pay my  
electricity bills with the absorbatent cost of power and it just keeps rising.  
at this point in time my retailer is paying me 0.10c/Kwh for power that my  
system puts back into the grid ..and selling it for for 0.27-0.28.5c/Kwh if not  
more.

so evergy companies are making a tidy profit on what my system generates  
which doesn't seem vair as i'm the one who invested in solarr and taking a load  
off the grid as well as helping the environment in the process.

tin that price of 0.10c/Kwh .the state Government is paying 0.06c/Kwh so they  
are making even more than retailers off what my system puts back into the grid.  
it's only fair that the feed in tariff reflects the value of my system supplying the  
grid with clean energy for others to use.

and the tariff should also rise in line with the increase of power prices and govt  
and retailers be made to pay a fair feed in tariff .

Kind Reards  
Peter Holzigal
