

**SUBMISSION TO IPART REVIEW**  
**SOLAR FEED-IN TARIFFS 2017/18**

**Tuesday, 9 May 2017**

1:29:04 PM

We are on the brink of irreversible climate change but we are wonderfully blessed with a fantastic solar resource. Solar is the future for Australia and we need to do everything to facilitate its expedient implementation to obviate any dead-end pursuit of CCS nonsense or any sort of clean coal oxymoron.

Thus we need:

\* A fair price for solar

\* A feed-in tariff that:

\* increases in line with the wholesale price of electricity

\* is regulated so retailers have to offer it as a minimum

\* represents the true value of solar which includes the environmental and health benefits and the network benefits of rooftop solar

Solar will only get cheaper the more it is implemented. We need the vision to comprehend just how cheap solar will become and how it will make fossil fuels completely obsolete so very quickly if only we commit to it.

Solar will probably eventually be our major energy source if not almost exclusive energy source. I just saw this. Inspiring, no?
