SOLAR FEED-IN TARIFFS 2017/18

Wednesday, 10 May 2017
10:33:32 AM

I demand a fair price for the excess solar power I generate. As a producer I should be given equal opportunity and the same price for power I have generated as other electricity generators.

The pricing increases should be inline with all producers and market changes.

There needs to be regulation or benchmarking of the wholesale cost of electricity to maintain fairness to consumer and producers.

Solar energy is in abundance and should be mandatory on all new buildings and dwellings that have the desired and appropriate orientation/aspect. This would future proof the electric supply system with environmentally clean sustainable power for the future. This is why I have installed solar electricity production systems in my own home. Change should start at the grass roots and at home.
