SOLAR FEED-IN TARIFFS 2017/18

Saturday, 20 May 2017

1:30:32 AM

the feed in tariff should be the same as feed out tariff

It :-

1) makes the system fairer. Stops rip off suppliers

2) Encourages more solar as it becomes more cost effective with higher feed in tariff

3) Discourages solar batteries that are ungreen and only are used when there is a low feed in tariff to save money.

Also batteries are never completely safe, what will the council regulations say about putting them on the side of a house when they could cause fire/explosion.??

I'll be the first up to council if my neighbour tries to put one near me. they should be at the bottom of the garden.

NB USA doesn't use batteries cause feed in = feed out.

under those conditions you wouldn't need a battery even if they were free. !!

The grid is a perfect battery use it.
