SOLAR FEED-IN TARIFFS 2017/18

Wednesday, 10 May 2017
10:44:39 AM

Dear IPART

I am writing with regard to the price that is paid via the solar feed-in tariff for electricity generated by domestic photo-voltaic panels, or rooftop solar.

I support the implementation of a fair price for solar power generated in this way. Electricity retailers should be required to offer a feed-in tariff that closely tracks the wholesale price of electricity. There are obvious benefits to the electricity network from the contributions made by rooftop solar PV generation, as well as health and important environmental benefits from moving away from dirty coal-powered electricity generation.

I believe it is important that a minimum feed-in tariff should be regulated rather than merely recommended. Retailers should be required to pay a fair price for the electricity contributed to the network by domestic photo-voltaic panels.

Thank-you.

Yours sincerely,
Riki Davidson
