Submission: If you say my solar generated power is worth less money than the 9cent per kwh I am paid you are effectively saying that this is the cost of power generation. Therefore that should be what I am charged for grid power. To steal my power off me for this rate while I am at work to on sell at 27cents a kwh is a criminal rort. Why do I have to subsidise the grid with MY cheaply and cleanly produced solar power???. The amount paid for my solar power is a subsidy to the network owners, it is a fact that the price of solar is cheaper than that generated by the power industry, so pay me a fair rate for taking my power!!!
