SOLAR FEED-IN TARIFFS 2017/18

Sunday, 21 May 2017

7:10:56 PM

Dear Sirs,

I have previously had and are currently exploring a solar energy system linked to the grid. It is my view that the price I would be paid for surplus power generated and returned to the grid should be in line with the wholesale price that would be paid for that electricity if accessed from the wholesale market. In fact given the environmental benefits of solar the price should also reflect these benefits. My previous system was economically viable due to the prices paid at that time. Pricing now is much lower and discourages investment in clean energy this is unfortunate.
