Submission: To whom it may concern. I holiday in Catherine Hill Bay with my family about 3 times a year which I note is more than the lagoon where the discharge will ultimately end up breaks over the beach. With that and many other concerns in mind I strongly suggest a full environmental impact study be done independently of silo water to assert the ongoing impact on the environment. I reject totally the notion that this is (or could be) an amendment to the existing license which allows for no waste to be discharged from the site other than in trucks.
