SOLAR FEED-IN TARIFFS 2017/18

Friday, 19 May 2017
11:26:48 AM

As a solar owner, I was encouraged to see a recent recommendation to increase the solar feed-in tariff. However, that increase needs to be made mandatory, and it should be made the minimum.

I don't have the option to withhold my feed-in electricity, such as other suppliers of wholesale electricity can. As a result, the solar feed-in tariff should increase in line with the wholesale price of electricity.

The solar feed-in tariff should recognise the environmental benefits to the community, as opposed to those who create carbon pollution as they generate their electricity.
