SOLAR FEED-IN TARIFFS 2017/18

Friday, 19 May 2017
12:17:41 PM

I do support a fairer price on feed-in electricity. The feed-in tariff should increase in line with the wholesale price of electricity.

The feed-in tariff should be a natural part of the regulated system.

I would not be without my solar system. It saves on the power stations burning more fossil fuel.

I took care that it was connected to the electrical phase where I use most electricity. My solar power helps me greatly where I need to run machines and pumps during the day. When it is fed into the grid I see it as a benefit to others, but feel that I am very poorly treated at only 5 cents per kWh.
