**SOLAR FEED-IN TARIFFS 2017/18**

**Friday, 12 May 2017**  
10:43:29 PM

Raising the solar feed-in tariff is a good first step to returning to a fair price for solar producers. The refunded price should be much higher, to acknowledge the important benefit to the grid of having solar production added in virtually for free, and without all the damaging climate and polluting impacts of coal stations. I have just received my bill and have produced 66% of the energy I used, yet received under \$15 for it! The new 11-14c per kWh must be passed on, and the amount increased regularly. Thank you
