Submission: I request that the feed-in tariff from rooftop solar be increased to encourage more homeowners to install panels because, firstly, am concerned about insufficient power capacity during the day when some of the older coal-fired plants are retired and secondly, solar panels reduce CO2 emissions. We can't afford to be in a situation where we have to build a new power station because we haven't been proactive, so the time is now, before the old plants close. Finally, rooftop solar reduces the price of electricity for all users by reducing reliance on expensive gas fired plants. Electricity wholesalers are reaping large profits from rooftop supply and should share an appropriate amount with their domestic suppliers.
