SOLAR FEED-IN TARIFFS 2017/18

Sunday, 21 May 2017

5:22:31 PM

I support a fair price for solar, it should increase in line with the wholesale price of electricity, the feed in tariff should not just be a benchmark range, it should be regulated so retailers have to offer it as a minimum, it should represent the true value of solar, recognizing the environmental and health benefits and the network benefits of rooftop solar. Solar produced electricity should be encouraged because of the enormous requirement to provide electricity to the Australian growing population. The government should reward people who are helping the generation of more electricity and who are making a stand for the environment.
