Submission: I am a Solar owner and supporter and want the price for producing power to go up not down. I have had to outlay the money to put this system on my roof and then sell this power back to the grid. I am like any power producer and want a guaranteed price for producing this power. I don't think the government is making the big power companies reduce their income from the power that they produce, so why should I have to take a hit for the power that I sell?
