

SUBMISSION TO IPART REVIEW
SOLAR FEED-IN TARIFFS 2017/18

Friday, 19 May 2017

2:24:08 PM

I believe it is important that people who feed electricity into the Grid for other's to use, should be paid a fair price.

My husband and I are pensioners, yet believe so strongly in the need to move urgently to sustainable energy, that we have put more solar panels on our roof, than we need.

The feed in tariff should be paid for fairly - in recognition of the environmental, health and network benefits it represents.

The feed in tariff should be in line with the wholesale price of electricity.

If sustainable energy was given the same financial support that coal and oil are given, it would become obvious that sustainable energy is the way of the future. Coal and oil are old technologies and they should be rapidly phased out.
