SOLAR FEED-IN TARIFFS 2017/18

Friday, 19 May 2017
11:56:14 AM

Why am I receiving only 6 cents for each kw of power I put back into the grid and pay over 30 cents per kw for the power I take from the grid? At this rate, solar power is being greatly undervalued. The feed-in value should represent the true value of solar and should increase with the wholesale price of electricity.
