Submission: "To IPART:

The solar feed-in-tariff needs to be increased and NOT reduced. Already it is pretty low and unless they are legislated to be higher there is little chance the Power companies will provide a meaningful tariff. As it is the power companies are really having it good - paying around 8 cents and for the same power charging anything up to 60c. If the power companies are sensible they will see that they are getting cheap power from consumers with no effort on their part.

Shiva"
