SOLAR FEED-IN TARIFFS 2017/18

Friday, 19 May 2017

4:01:46 PM

I support an increase to the solar feed-in tariff as the current 6 cents per Kwh is no where near a fair return for supplying to the grid when compared to the price the retailers are charging. The price should be regulated to be inline with all wholesale electricity pricing. The source of the electricity the retailers use should be reflected in a positive way in the feed-in tariff. Some regulation is required because it seems the retail providers of electricity are taking advantage of all those individuals and families that have gone to the expense of doing the right thing by putting on solar, and not relying wholly on the less desirable alternatives.
