Submission: I am a long time resident of Catherine Hill Bay and I object very strongly to the changes proposed to allow treated sewerage to enter our local waterways (ocean via creek). This is something the developer should have had covered in the submission for this developement . Something as important as sewerage disposal should have been overcompensated for in the first place . I think there may have been a few untruths told to get this developement underway as is the case in many developements . Sewerage is sewerage, treated or not, if you can't drink it, surely it shouldn't be drained to the ocean. I fear if this is passed then the new developement at the other end of town will be doing exactly the same thing to our north end creek. Hasn't Catho been damaged enough by this overdevelopement
